

VI variability of common wheat, adaptation to different soils

1-6 150 vars.

12 chance origin of some vars X

15 careful selection of separate ears of corn in Columbian times

16 + Virgil X

52 Disbelievers receipt of change of seed but then he studying vars & manners

55 1/10 of seed permitted even with greatest care

59 on one variety soon predominating over
(800) another in wheat, & hence called degenerating
(He has shown how grey white trifle is hereditary) without destruction

65 on micropilla tending to sport in some vars.

66. Galericia does not crop because flowers earlier (2)

70. Wheat seems affected of climate whence derived

(Evidently believes in copying)

23 Habit of growth in the

propagation of plants

64

show a different kind of quality of straw
